

Learn More About Long Island IVF

We hope you'll take a minute to read our first in a series of brief newsletters written for you, our valued colleagues and fellow physicians. These newsletters are intended to familiarize you with Long Island IVF – again – and let you know of some new events that are happening with us. As always, we value your relationship with us and hope that you'll contact us at any time with questions or referrals. Thank you!

When couples come to Long Island IVF, the first thing we want them to know is that **there is hope**. Statistics now report that nearly one out of every six couples in the U.S. experiences infertility – and perhaps you've helped many couples try to overcome it. But when it just isn't happening and precious time is passing, your patients need more help. We've helped countless couples through the hurdles of infertility and guided them down personal paths to begin their own families – and if the time is right, we can help your patients, too.

Our Medical Team

We are run by experts in REI who are nationally recognized for their success, compassion and commitment to research. Drs. Kenigsberg, Brenner and Drosch are each board certified in REI. And not only did our practice achieve the first successful IVF on Long Island in 1988, but our doctors have received many national awards for their excellence, including *Best Doctors in New York* and more. Our physicians are also well published, including the popular book for patients called *The Baby Solution* by Dr. Kenigsberg.

Our team of physicians is supported by a highly trained staff of embryologists, nurses, lab technicians and administrators. Long Island IVF meets the strictest national standards for clinical fertility services and laboratory standards. We are a member of the Society of Assisted Reproductive Technologies (SART), under the auspices of the American Society of Reproductive Medicine, and report our success rates to the CDC. In fact, our program has exceeded the national average in every year of reported national statistics. Our laboratory meets the highest standards including those established by the Clinical Laboratory Improvement Act and is also accredited by the College of American Pathologists.

Leading-Edge Science and Technology

In order to provide the best possible chance for success, we offer a wide range of programs and services that have been used successfully at Long Island IVF and nationwide. Our advanced services are used with personal treatment plans that are specifically tailored to meet patients' individual needs – all enhancing the likelihood of success.

Our programs and services include: InVitro Fertilization; Superovulation; Egg Donor; Male Infertility & ICSI; Preimplantation Genetic Diagnosis; Complete Infertility Testing and Treatment; Fertility Counseling; Ovulation Induction; Sperm Banking; Donor Sperm; Pregnancy Loss Evaluation Service; Laparoscopic Laser Surgery; Hysteroscopic Surgery; and Reproductive Endocrinology.

The Best Environment For Care

Going through fertility treatments can require many visits with us – which is why we have three facilities throughout Long Island. Our offices in Melville, Lake Success, and Port Jefferson are cutting edge, with private parking and waiting areas. ***We are also excited to announce the opening of our new state-of-the-art IVF center in early 2008!*** The new center, on the Nassau/Suffolk border in Melville, will include medical suites, exam and surgical procedure rooms, and embryology laboratories in a modern and spacious facility. It's being designed with every patient comfort and convenience in mind.

Working With You

We would also like you to know that when you send patients to us, we work with you to complete their care. And once a pregnancy is achieved, we send your patients back to you for the best care throughout their pregnancy.
